Web Development CA2

Proposal

As a project proposal we want to create a holidays site which would allow you to book a ticket to go wherever you want and to as many places as you want. We will also create a site which contains an important information section for the holiday destinations. We will suggest places for you to spend your holidays. The main function of the site is to allow you to book tickets, choose any tourist destinations that you would like to go to, and any seasonal festivities in a specific country.
